A problem context is given, and a solution is required: The  
student must formulate a model and reason through it to obtain  
a solution. An expert in evidence-centered design, she leads  
and advises innovative projects that run the spectrum from  
interactive learning design and embedded assessments, to  
independent research and evaluation.

An advantage of this approach of time series analysis is the  
linkage of different methods for time series analysislinking  
traditional data mining tools in time seriesand constructing  
new algorithms for analyzing time series. Separate Observable  
Variables would be called for, as recalling the form is not  
equivalent to being able to reason through the model. If it is  
sufficient it contains all the information, in a precisely  
defined sense, about that parameter.
