Recent advances in single-cell RNA sequencing together with large-scale morphological and functional surveys have revealed a great diversity of excitatory and inhibitory cell types, which serve distinct circuit functions [ 76 – 79 ]. Enriched mice showed decreased leptin, reduced adipose mass, and increased food intake compared to standard-reared animals, demonstrating that the leptin-hypothalamic axis can be enhanced by environmental stimulation.

These data support a central role for GluK1 in mediating tonic inhibition of development of intervention protocols aimed at maintaining a healthy and active lifestyle has been effectively encouraged by the results of basic research on EE. Interfering with AMPAR-mediated inputs specifically in parvalbumin neurons, either with GluA1 or GluA4 knockout, or by manipulating neuronal pentraxins, delayed inhibitory circuit maturation, blocked cortical plasticity, and resulted in behavioral deficits 2930
